

Aftercare for Electrolysis

We use sterex needles and aftercare to ensure your comfort and safety as part of the special care we take to protect you from infection.

A good homecare will help to prevent any spots or minor infections occurring. It is important to take extra care of the treated area for 24-36 hours after treatment.

- make up should be left off during this time
- please avoid exposure to direct sunlight or sun beds
- avoid perfumed products

Regrowth should not be plucked or removed with creams or wax inbetween treatments. You can cut any noticeable hairs with scissors.

Aftercare for Thread vein removal

- keep area dry for 24 hours after treatment
- keep area free of make up and creams for 24 hours after treatment
- the skin that has been treated may feel rough or have very fine scabs. Be careful over these areas with face clothes or towels. Pat face dry rather than rubbing as the skin needs time to heal
- you can apply dermalogica's climate control or Aloe Vera to help protect and heal the area
